Fleet Size

Preference Overview

The Fleet Size preference is based on customer data. The vehicle fleet size may be a single number or specified by vehicle type. It will typically be larger than the number of vehicles specified in an optimized schedule. The Operator might want to force a larger number of vehicles into day to day operations as a vehicle load balancing device. For example, he may wish to ensure that particular vehicles are never permanenly parked in a depot (never used).

For the moment, there is no baseline preference and there are currently no templates. It may be implemented in Expert Mode by Optibus Professional Services.
