# Boarding Time Relaxation

Work-flow to Use Boarding Time Relaxation

» There is currently one Optibus template

» Use **Load Template** to set up the preference

» Repeat **Load Template** for additional instances of the template

Preference Overview

A provision for boarding time may be made in the customer schedule data. Here we allow for the possibility of reducing it at the expense of a sliding penalty that increases with the reduction of a scheduled trip boarding time. If boarding time is defined, it will appear in the relevant vehicle information box:

In the example, the boarding time extends the scheduled trip time by 10 min.

Templates Available from Optibus

Boarding Time Relaxation

Purpose:

Sets the penalty for relaxing the boarding time.

Prerequisites: The boarding time must be defined in the Dataset for the schedule.
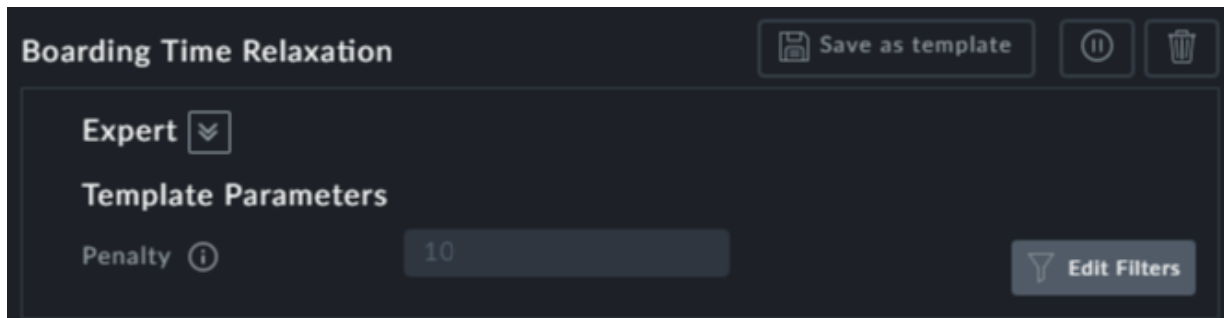

Opening Dialog:

Figure 1-1: Boarding Time Relaxation preference

Points to note:

The only entry field here is the opening penalty. It increases nearly linearly with boarding time violation.
