# Driver Walk

## Work-flow to Use Driver Walk

The Driver Walk preference is accessed through **Load Template** and only one instance of it is permitted.

## Preference Overview

A driver may move on foot for a vehicle changeover between very close locations after a break or a split break. Maximum walking distance and walking time are specified here.

Setting a high penalty reduces the number of walks.
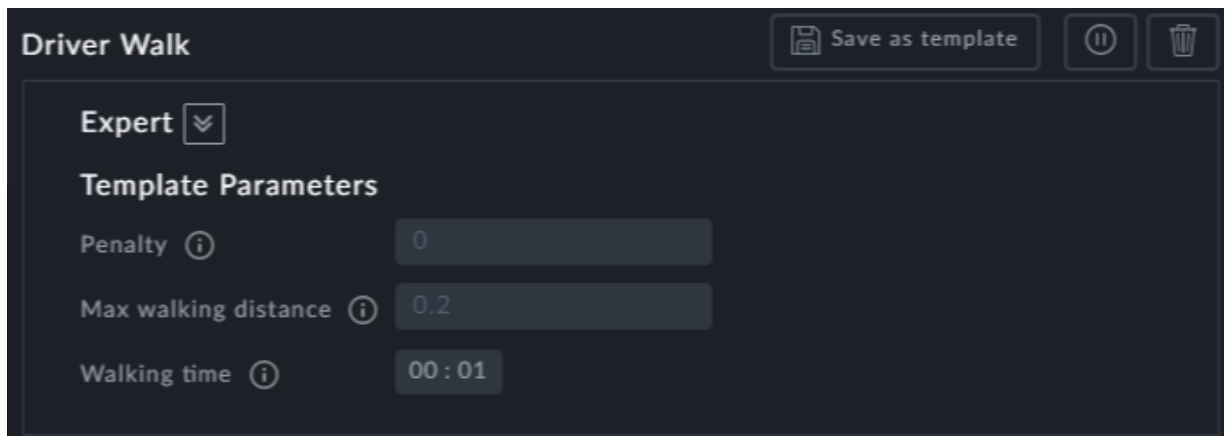

## Templates Available from Optibus

### Driver Walk

**Purpose:**

As stated in the Overview

**Prerequisites:** None.

**Opening Dialog:**

**Point to note:**

» **Penalty**: The higher the penalty, the less the number of walks. You can leave the penalty at zero to prefer unlimited walks within the time and distance limits

» **Max walking distance** and **Walking time**: Ensure that these two values are realistic and mutually consistent. The default shown of up to 200 m in 1 minute may be a bit demanding!
